Dear Francis:

I just wanted to write you a brief note to thank you and your team for performing an exemplary job at the USDA George Washington Carver Center in Beltsville, MD. The coordination and contribution to the design and its implementation by Specified Electrical Systems' management team of Norm Strickland and Mathew Osborne was textbook. As we were all made aware of at the beginning of the negotiations with the USDA, this project was of critical importance to the survivability of their Nationwide Data Center. The interface of a 650kw generator and 300kva UPS with the existing back-up generator and UPS system was considered a vital component in maintaining the Data Center in times of extreme emergency.

The Specified Electrical Systems Team that worked with our engineers and the USDA Data Center Management Group proved to be a vital component to a successful project. The plan devised by your men to relocate half of the existing loads from the existing back-up system to this new one was executed to perfection. All the while the Data Center remained fully operational and no data was lost.

We at Goel Services are proud to work with Specified Electrical Systems and are looking forward to similar projects in the future.

Sincerely,

PJ Goel
President
